FLUSH and REGISTER DNS, DELETE TEMPORARY INTERNET FILES

1. From Start ➔ All Programs/Program Files ➔ Accessories, right-click on ‘Command Prompt’ and select ‘Run As Administrator’.

2. At the prompt, type ‘ipconfig /flushdns’ and hit ENTER.

3. ‘Successfully flushed the DNS Resolver Cache’ message should appear.
4. Next, type ‘ipconfig /registerdns’ and hit ENTER.

5. ‘Registration...has been initiated’ message should appear.

6. Close the command window by clicking the close gadget (red X) in the top right corner.

7. From the browser window, go to the Tools Menu → Internet Options. Under ‘Browsing History’, click ‘Delete...’. Select ‘Temporary Internet Files’ and click ‘Delete’.
